- 3. Educated people usually display great interest in scientific and technical information in the Soviet Union. This might be explained as follows:
  - (a) In the laboratories of the Ministry there are scientific engineer-technical societies in which are enrolled large numbers of workers. These societies carry on a great deal of scientific research work.
  - (b) Divisional production-technical magazines and newspapers constantly maintain a large number of correspondents among the specialists in scientific research work.
  - (c) The articles which appear in technical magazines and newspapers always have a great deal of response from specialists and scientific research workers.
  - (d) The private libraries of engineers usually contain a great deal of current technical material.
  - (e) The popular scientific lectures always attract a large audience. Interest is just as great in these lectures as it is in lectures on the international situation. There is no need to require people to attend such gatherings as they go willingly.
